A tool to generate posts from a Meetup Event

Diego Minguzzi

GenAI-Gurus.com

Gen-AI Gurus: Social Tools

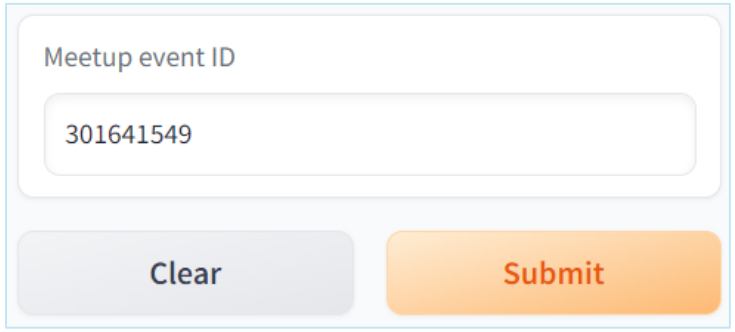

Supporting the Community by streamlining/automating the management of social platforms, e.g. LinkedIn, YouTube, etc.

First tool: from a Meetup event announcement, create an engaging Linked-In post:

- Extract information from the Meetup site
- Create the prompt, send the request to the OpenAI API endpoint (gpt-3.5-turbo)
- Use the Meetup information and the OpenAI response to create the post
- The user can choose one of the supported methods to create the result
- The tool can be extended with additional methods.

Gen-AI Gurus: Social Tools

No free access to the Meetup API. A playground exists to query meetup data.

Formatted Meetup request

Meetup event data

Prompt (Parsed Meetup results + parameters)
